Agile Estimating and Planning

## Mike Cohn
Mountain Goat Software
Lafayette, CO
mike@mountaingoatsoftware.com

1

# Mike Cohn - background

Agile coach and trainer

- Founding member and director of Agile Alliance and Scrum Alliance
- Founder of Mountain Goat Software
- Ran my first Scrum project back in 1995
- Typical programmer to manager etc. progression

2

Thursday, March 6, 2008

What's a good plan?

- A good plan is one that supports reliable decision-making
- Will go from
  - We'll be done in the third quarter
  - We'll be done in August
  - We'll be done August 18th

"It's better to be roughly right than precisely wrong."

~John Maynard Keynes

© Mountain Goat Software, LLC

4

What makes planning agile?

Is more focused on planning than the plan

Encourages change

Results in plans that are easily changed

Is spread throughout the project

5

Product, release, sprint planning

Release 1   Release 2   Release 3

Release Plan
Sprint 1	Sprint 2	Sprint 3	Sprints 4–7
We'll focus here today

Task A	8 hours
Task B	16 hours
Task C	5 hours
Task D	8 hours

6

Agenda

- Product backlog estimation units
  - Story points
  - Ideal time
- Techniques for estimating
- Sprint planning
- Release planning

Code the UI	8
Write test fixture	6
Code middle tier	12
Write tests	5
Automate tests	4

We're talking about these right now

9

Slide 10
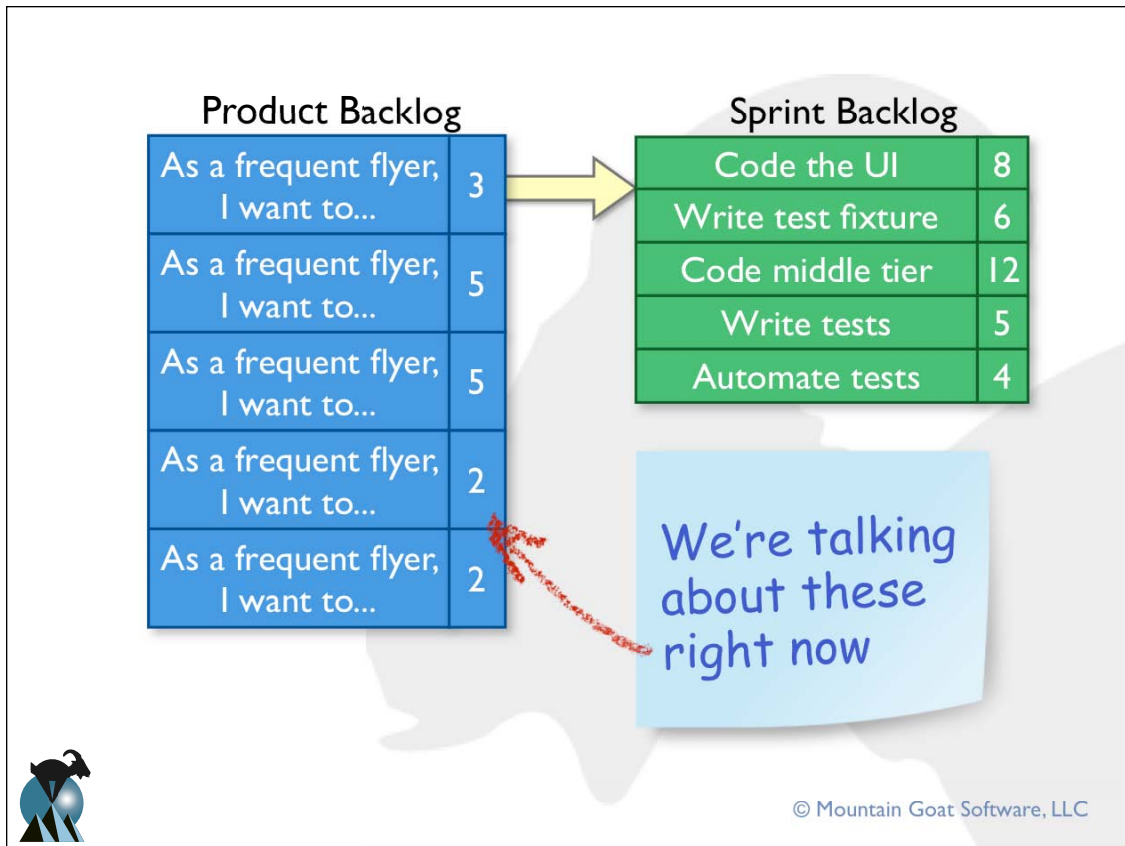

How long will it take...

- ...to read the latest Harry Potter book?
- ...to drive to Austin?

10

Thursday, March 6, 2008

Estimate size; derive duration

Size	→	Calculation	→	Duration

300 kilograms	→	Velocity= 20	→	300/20 = 15 sprints
Measures of size

- Traditional and agile measure size differently

Traditional measures of size

Lines of Code
Function Points

Agile measures of size

Story points
Ideal days

Thursday, March 6, 2008

Story points

- The "bigness" of a task
- Influenced by
  - How hard it is
  - How much of it there is
- Relative values are what is important:
  - A login screen is a 2.
  - A search feature is an 8.
- Points are unit-less

As a user, I want to be able to have some but not all items in my cart gift wrapped.

5

One order of magnitude

- We're good over one order of magnitude
- So think about where to place it on your product backlog

| 1 | 10 |

A typo

The largest new feature

15

Estimating in
Ideal Time

16

Ideal time

- How long something would take if
  - it's all you worked on
  - you had no interruptions
  - and everything you need is available
- The ideal time of a football game is 60 minutes
  - Four 15-minute quarters
- The elapsed time is much longer (3+ hours)

Elapsed time vs. ideal time

Ideally
- Monday has 8 hours
- Each week has 40 hours

So, this developer will only make four hours of progress on Monday.

It will take two calendar days to complete one ideal day of work.

But instead...
Monday has:
- 1 hour of meetings
- 3 hours of email
- 4 hours left for the project

"How long will this take?"
☐ Are you answering what is being asked?

Thursday, March 6, 2008

Ideal time vs. elapsed time

- It's easier to estimate in ideal time

- It's too hard to estimate directly in elapsed time

  - Need to consider all the factors that affect elapsed time at the same time you're estimating

Comparing the approaches

- Story points help drive cross-functional behavior
- Story point estimates do not decay
- Story points are a pure measure of size
- Estimating in story points is typically faster
- My ideal days cannot be added to your ideal days
- Ideal days are easier to explain outside the team
- Ideal days are easier to estimate at first
- Ideal days can force companies to confront time wasting activities

What I usually do

- I prefer story points
- ...but they make some teams uncomfortable, so I'll
  - Start with ideal time
    - Gives the team a nice foundation for the initial stories
    - Helps team get started
  - Define "1 story point = 1 ideal day"
  - Then
    - Gradually convert team to thinking in unit-less story points
    - "This story is like that story."
    - Stop talking about how long it will take

23

Techniques for Estimating

24

Thursday, March 6, 2008
Irrelevant information

- Irrelevant information has an impact on estimates:
  - Specification length
  - Unnecessary detail
  - Unneeded "requirements"
- It's important
  - to avoid clearly irrelevant information
  - to acknowledge that we're all affected by this
  - to not dilute highly relevant information with information of marginal value

Source: *How to avoid impact from irrelevant and misleading information on your cost estimates*, Magne Jørgensen and Stein Grimstad, Simula Research Laboratory, Simula Research Labs Estimation Seminar, Oslo, Norway 2006.

© Mountain Goat Software, LLC

25

Specification length

Group A
- Given a one-page spec.

- 117 hours

Group B
- Given a spec with exactly the same text but was 7 pages long
- Increased length achieved through
  - double line space
  - wide margins
  - larger font size
  - more space between paragraphs

- 173 hours

Source: *How to avoid impact from irrelevant and misleading information on your cost estimates*, Magne Jørgensen and Stein Grimstad, Simula Research Laboratory, Simula Research Labs Estimation Seminar, Oslo, Norway 2006.

© Mountain Goat Software, LLC

26

Thursday, March 6, 2008

Irrelevant information

Group A
- Given project spec.

— • 20 hours

Group B
- Given same spec but with estimation-irrelevant details added:
  - end users' desktop applications
  - user passwords,
 - etc.

— • 39 hours

Source: *How to avoid impact from irrelevant and misleading information on your cost estimates*, Magne Jørgensen and Stein Grimstad, Simula Research Laboratory, Simula Research Labs Estimation Seminar, Oslo, Norway 2006.

© Mountain Goat Software, LLC

Extra requirements

Group A
- Given requirements R1–R4

— • 4 hours

Group B
- Given requirements R1–R5

— • 4 hours

Group C
- Given requirements R1–R5
 - but told to estimate R1–R4 only

— • 8 hours!

Source: *How to avoid impact from irrelevant and misleading information on your cost estimates*, Magne Jørgensen and Stein Grimstad, Simula Research Laboratory, Simula Research Labs Estimation Seminar, Oslo, Norway 2006.

Thursday, March 6, 2008

Estimate by analogy

- Comparing a user story to others
  - "This story is like that story, so its estimate is what that story's estimate was."
- Don't use a single gold standard
- Triangulate instead
 - Compare the story being estimated to multiple other stories

29

Triangulation

- Confirm estimates by comparing the story to multiple other stories.
- Group like-sized stories on table or whiteboard

3 pts	Story A		
2 pts	Story C	Story D	Story F
1 pts	Story B	Story E	

30

Disaggregation

- Breaking a big story into smaller stories or tasks
  - You know how long the smaller tasks take
  - So, disaggregating to something you know lets you estimate something bigger you don't know
- Sometimes very useful
- But disaggregating too far causes problems
  - Forgotten tasks

31

How much effort?

- A little efforts helps a lot
- A lot of effort only helps a little more

32

Thursday, March 6, 2008

Use the right units

- Can you distinguish a 1-point story from a 2?
  - How about a 17 from an 18?
- Use a set of numbers that make sense; I like:
  - 1, 2, 3, 5, 8, 13

  Include 0 and ½ if you want

- Stay mostly in a 1-10 range
- Nature agrees:
  - Musical tones and volume are distinguishable on a logarithmic scale

© Mountain Goat Software, LLC

33

Planning poker

- An iterative approach to estimating
- Steps
  - Each estimator is given a deck of cards, each card has a valid estimate written on it
  - Customer/Product owner reads a story and it's discussed briefly
  - Each estimator selects a card that's his or her estimate
  - Cards are turned over so all can see them
  - Discuss differences (especially outliers)
  - Re-estimate until estimates converge

© Mountain Goat Software, LLC

Estimate these

Product backlog item	Estimate
Read a high-level, 10-page overview of agile software development in *People* magazine.	
Read a densely written 5-page research paper about agile software development in an academic journal.	
Write the product backlog for a simple eCommerce site that sells only clocks.	
Recruit, interview, and hire a new member for your team.	
Create a 60-minute presentation about agile estimating and planning for your coworkers.	
Wash and wax your boss' Porsche.	
Read a 150-page book on agile software development.	
Write an 8-page summary of this conference for your boss.	

Why planning poker works

- Those who will do the work, estimate the work[1]
- Estimators are required to justify estimates[2, 3]
- Focuses most estimates within an approximate one order of magnitude[4, 5]

© Mountain Goat Software, LLC

Why planning poker works

- Combining of individual estimates[6] through group discussion[7] leads to better estimates
- Emphasizes relative rather than absolute estimating
- Estimates are constrained to a set of values so we don't waste time in meaningless arguments
- Everyone's opinion is heard
- It's quick and fun

Sprint Planning

40

Thursday, March 6, 2008
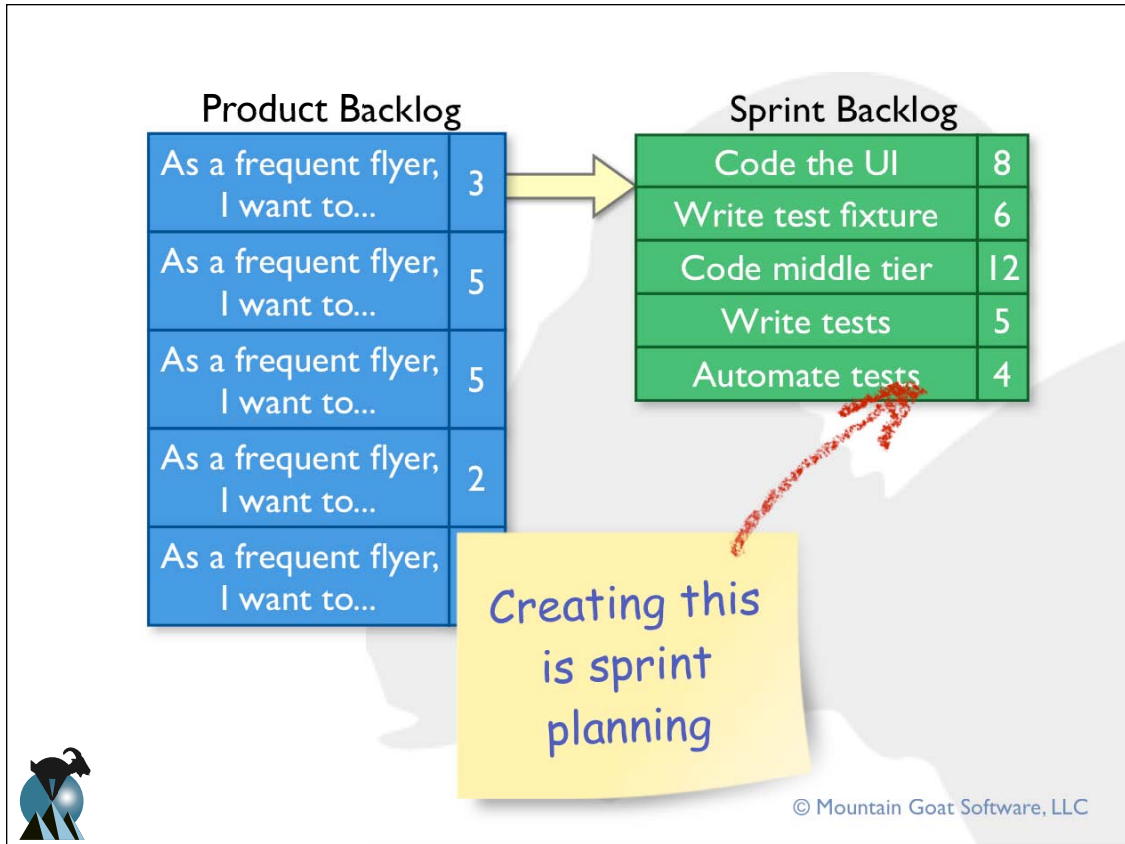

41

Two approaches

- Velocity-driven sprint planning
  - "We finished 15 story points last time, let's plan on 15 story points this time."
  - Very unreliable in what will be accomplished during an iteration
    - Velocity is mostly useful over the long term
- Commitment-driven sprint planning

42

Thursday, March 6, 2008

Commitment-driven sprint planning

- Discuss the highest priority item on the product backlog
- Decompose it into tasks
- Estimate each task
  - Whole team estimates each task
- Ask ourselves, "Can we commit to this?"
  - If yes, see if we can add another backlog item
  - If not, remove this item but see if we can add another smaller one

43

Estimate availability

Person	Hours per Day	Hours per Sprint
Sergey	4-6	40-60
Yuri	5-7	50-70
Carina	2-3	20-30
Total		110-160

44

Thursday, March 6, 2008

It looks something like this

As a user, I want ...

2

- Code the abc class (8 hours)
- Code the user interface (4)
- Write test fixtures (4)
- Code the xyz class (6)
- Update performance tests (4)

Team can commit, so they continue...
As a user, I want ...

3

- Prototype the UI (8 hours)
- Demo UI to 3 outside users (3)
- Code new UI (12)
- Update documentation (3)

46

Thursday, March 6, 2008

A caution

- The purpose of the sprint planning meeting is to arrive at a commitment to a sprint goal or set of product backlog items.

- The purpose of the meeting is not to come up with a list of tasks and hours.

- The tasks and estimates are a tool for determining what we can commit to.
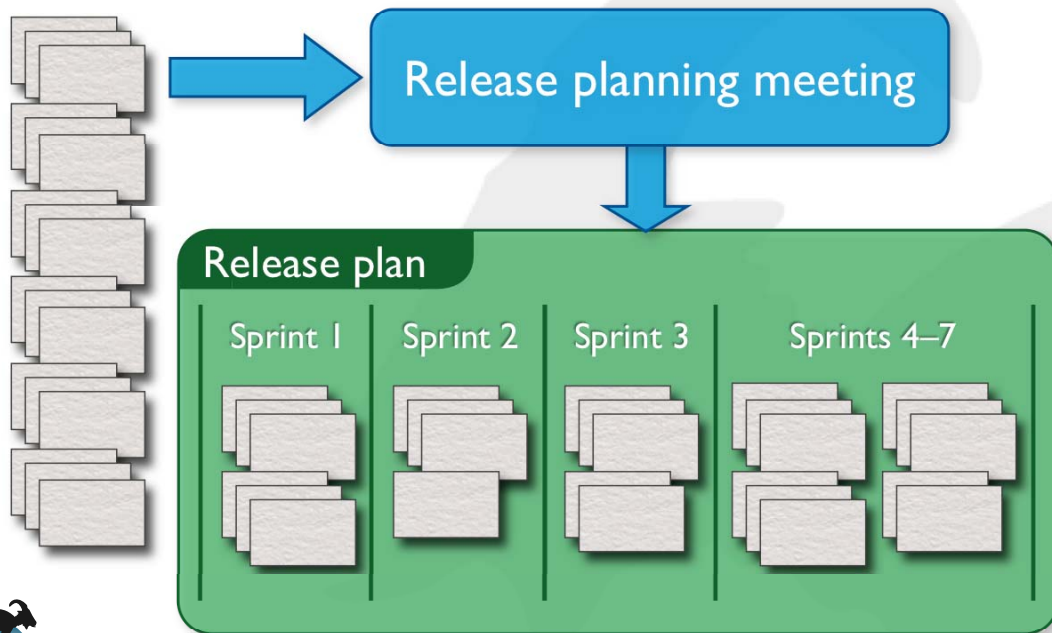

© Mountain Goat Software, LLC

Release Planning

© Mountain Goat Software, LLC

Thursday, March 6, 2008

Release planning

Release planning meeting

Release plan

| Sprint 1 | Sprint 2 | Sprint 3 | Sprints 4–7 |

© Mountain Goat Software, LLC

Velocity

- To do a release plan, you need to know or have an estimate of velocity

- Three ways to get velocity:
    1. Use historical averages
    2. Run 1-2 iterations and see what you get
    3. Forecast it

- Should be expressed as a range
    - Size of range depends on familiarity of team, domain, and technologies

© Mountain Goat Software, LLC

Forecasting velocity

- Just like commitment-driven sprint planning

  - Estimate available hours for the sprint

  - Repeat until full:

    - Pick a story, break into tasks, estimate each task

51

An example

- Estimating available hours

Person	Hours per Day	Hours per Sprint
Sergey	4-6	40-60
Yuri	5-7	50-70
Carina	2-3	20-30
Total		110-160

52

Thursday, March 6, 2008

An example

At 110-160 available hours per sprint, what is the team's velocity?
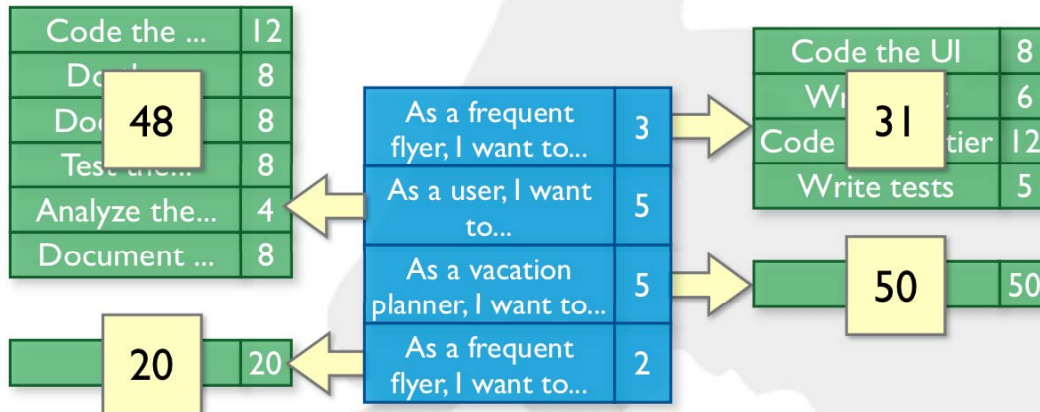

53

# Updating the release plan

- Revisit the release plan at the end of every sprint

- Update it based on:

  - Current understanding of velocity

  - Current prioritization of the product backlog

- This should be a very short and sweet process

54

Use actual velocities once they're available

Mean (Best 3) = 37
Mean (Last 8) = 33
Mean (Worst 3) = 28

Sprints

© Mountain Goat Software, LLC

55

Extrapolate from velocity

Assume:
There are five sprints left.

At our slowest velocity we'll finish here (5×28)

At our long-term average we'll finish here (5×33)
At our best velocity we'll finish here (5×37)

Consider drawing an arrow at most recent velocity as well.
