What is a self-organizing team?

- Self-organizing does not mean
  - the team gets to decide *what* goal they pursue
  - or even necessarily *who* is on the team
- Self-organizing is about the team determining how they will respond to their environment
  - (and managers/leaders can influence that environment)
Complex adaptive systems

A CAS is characterized by:

- A dynamic network of many agents
  - acting in parallel
  - acting and reacting to what other agents are doing
- Control is highly dispersed and decentralized
- Overall system behavior is the result of a huge number of decisions made constantly by many agents

John Holland in Complexity: The Emerging Science at the Edge of Order and Chaos by Mitchell Waldrop

Some examples

- Ant colony or bee hive
- Flock of geese heading south
- Us right now
- A crowd batched up to get into a concert or sporting event
- A family preparing, eating, and cleaning up after a meal
- Cars and drivers on the highway
- A software team
Control is not evil

- Simple rules or incentives are used to guide or direct behavior
  - “Drive this direction and on this side on the highway.”
- For bioteams, these are provided by nature
  - “Produce honey”
- For our teams,
  - Rules and incentives can be added by managers or leaders...or in some cases by team members

Self-organization does not mean that workers instead of managers engineer an organization design. It does not mean letting people do whatever they want to do. It means that management commits to guiding the evolution of behaviors that emerge from the interaction of independent agents instead of specifying in advance what effective behavior is.

~Philip Anderson, The Biology of Business
Although project teams are largely on their own, they are not uncontrolled. Management establishes enough checkpoints to prevent instability, ambiguity, and tension from turning into chaos. At the same time, management avoids the kind of rigid control that impairs creativity and spontaneity.

~Takeuchi & Nonaka

To be sure, control is still exercised; but, it is subtle and much of it is indirect.

~Peter DeGrace & Leslie Stahl
Wicked Problems, Righteous Solutions
What this is not

• We’re not talking about
  • Being deceptive or sneaky
  • Manipulating people
• Nothing I’m going to advocate needs to be secret
• But there may be reasons why you don’t broadcast your reasons

Two models of subtle control

1. Containers, Differences & Exchanges
2. Anderson’s Seven Levers
Using the CDE model

- You can influence how a team self-organizes by altering the:
  - Containers
    - formal teams, informal teams, clarify (or not) expectations
  - Differences
    - Dampen or amplify them within or between containers
  - Exchanges
    - Insert new exchanges, new people, new techniques or tools
Containers

- Enlarge or shrink teams
- Enlarge or shrink the responsibility boundary of teams
- Change team membership
- Create new teams or groups

Differences

- Don’t require consensus
  - Creativity comes from tension
  - Quiet disagreement is not as good as fierce debate that leads to behavior change
- Ask hard questions
  - Then expect teams to find solutions
Transforming exchanges

- Encourage communication between teams and groups
  - Who isn’t talking who should?
- Add or remove people from exchanges
  - Change reporting relationships
  - Relocate people
  - Compliance with external groups
- Encourage learning

An Example

Would you alter a Container, Difference or Exchange in this case?

- The team consists of four developers, two testers, a database engineer and you. The developers and testers are not working well together. Developers work in isolation until two days are left in the iteration. They then throw the code “over the wall” to the testers.
Two models of subtle control

1. Containers, Differences & Exchanges

2. Anderson’s Seven Levers

The self-organizing path

- Self-organization is not something that happens one time
  - A team is never done doing it
  - The team continually re-organizes in a sense-and-respond manner to its environment
- As you see the team self-organize you can influence, but not control or direct, its path
- We can view this as the evolution of a team
Self-organization proceeds from the premise that effective organization is evolved, not designed. It aims to create an environment in which successful divisions of labor and routines not only emerge but also self-adjust in response to environmental changes. This happens because management sets up an environment and encourages rapid evolution toward higher fitness, not because management has mastered the art of planning and monitoring workflows.

~Philip Anderson

“Seven Levers for Guiding the Evolving Enterprise,” in The Biology of Business edited by John Henry Clippinger III.

Variation, selection & retention

- Evolution is the result of three elements:
  - Variation, selection and retention
- Consider a giraffe:
  - Variation: A random mutation that leads to a longer neck
  - Selection: The long neck helps it reach food others can’t; so it it more likely to survive and breed
  - Retention: The mutation is passed to its descendants
Seven levers for influencing team evolution

1. Selecting the external environment
2. Defining performance
3. Managing meaning
4. Choosing people
5. Reconfiguring the network
6. Evolving vicarious selection systems
7. Energizing the system

Philip Anderson, “Seven Levers for Guiding the Evolving Enterprise.”

Select the external environment

- More than just the physical environment
- What business are we in?
  - (OK, maybe you can’t influence this one, but someone can
- The company’s approach to innovation
  - Fast follower or innovator? Are mistakes OK? When?
- Types of projects worked on and the rate at which they are introduced to the organization
- Expectations about multitasking and focus
Define performance

- The principle of selection tells us that the traits that help us survive will be the ones retained.
- Managers and leaders send messages about which traits should survive.
- What message is your organization sending about the relative importance of short vs. long-term performance?
  - What messages are sent if the organization:
    - Provides training
    - Supports working at a sustainable pace
    - Allows employees time to explore wild ideas
    - Doesn’t exchange meeting a deadline for unmaintainable code

Manage meaning

- Individuals in a CAS respond to the messages they receive; e.g.,
  - bees responding to a “danger” message
  - ants responding to a “food found over here” message
- Leaders can push messages into the system
  - e.g., putting the team in touch with customers
- Or keep messages out
- Meaning often comes from the stories, myths and rituals that are repeated
  - “We will become profitable this quarter.”
  - “Our GM counts the cars in the lot every day at 5 PM”
Choose people

- Clearly, who is on the team influences how they self-organize
- Adjust
  - Team size
  - Location
  - Background
  - Experience
  - Skepticism
  - Decision-making style
  - Gender
  - Motivation
  - Eye color
- Some people are like “glue” and pull a team together and keep it there

Reconfigure the network

- Communication paths (formal and informal) can be more important than the individuals
- You can introduce or remove flows
- To other teams, experts in the organization, customers
Reconfiguring the network for a global team

Distributed Scrum: Agile Project Management with Outsourced Development Teams at HICSS 2007 by Jeff Sutherland, et al.

Evolve vicarious selection systems

- Variation—Selection—Retention
  - Selection was determining which variations will be retained
    - Can take a long time
  - So we often use vicarious selection systems
    - This is an animal that can smell that a food is poisonous, rather than eating it
  - Using only the marketplace as our selection mechanism takes too long
  - Organizations also evolve vicarious selection systems
    - Retrospectives, Google's 20% policy, compensation
Energize the system

- Unless energy is pumped into the system, entropy will set in
- Make sure the group has a “clear, elevating goal”† or an “igniting purpose”‡
- Motivation
  - Project chartering: Vision box, press release, magazine review, elevator statement
- Opportunity
  - To learn, a bigger role, to go onto even better projects, and so on
- Information
  - Customer visits, training, conferences, brown-bags

Subject: Internet Tidal Wave

May 25, 1995

The Internet is a tidal wave. It changes the rules. It is an incredible opportunity as well as an incredible challenge. I am looking forward to your input on how we can improve our strategy to continue our track record of incredible success.

Bill G.
